# Data Warehouse Modernization And ETL Tool Migration

Leading Swiss Insurance Company in Europe

THE CLIENT PROBLEM STATEMENT

- Lack of single standardized technical platform for all Data Warehouse environments.

- Existing legacy tools which are at the end of their life cycle

- Inefficient usage of hardware resources

- Multiple Reporting silos

SOLUTION

- Extraction of ETL logic from Cobol code and un-documented system
- Developed ETL architecture.
- Developed and implemented the System with minimum Client / User involvement
- Functional/Regression Testing performed by comparing the results of the new system with that of old system
- Ensured Daily data load is completed in stipulated ETL window

Tools & Techniques

solaris

informatica POWERCENTER

REDWOOD

IBM DB2

ORACLE

BUSINESS OUTCOME

- Significant reduction in cost through Dual shore Model.
- Standardization of technical platform
- Reduction in Hardware and License cost
- Minimum Client Involvement
